# Clinical Encounter Note

Status: DRAFT NOTE | Hypertension follow-up

### Patient

Eleanor Hartman | MRN-20240001 | DOB 1958-03-14 | Sex F
Allergies: NKDA
Conditions: Essential hypertension; Hyperlipidaemia
Physician: Dr. Sarah Chen | Date: 2026-09-14T09:00:00Z

### Subjective

Patient reports occasional morning headaches since last visit. She denies dizziness, chest pain, or shortness of breath. Medication adherence confirmed - Lisinopril 10 mg daily and Atorvastatin 40 mg nightly. Patient attributes symptoms to increased work-related stress. Live browser edit.

### Objective

BP: 148/92 mmHg (elevated). Weight: 68 kg (stable). HR: 74 bpm, regular. Respiratory rate: 14/min. No peripheral oedema. Auscultation: clear lung fields bilaterally.

### Assessment

Essential hypertension - suboptimally controlled. Likely exacerbated by psychosocial stressors. Hyperlipidaemia - stable on current therapy.

### Plan

1. Increase Lisinopril to 20 mg daily for improved BP control.
2. Monitor for ACE inhibitor-related dry cough; switch to ARB if symptomatic.
3. Order basic metabolic panel (BMP) - check renal function and electrolytes prior to next visit.
4. Home BP monitoring daily - log and bring to follow-up.
5. Follow-up appointment in 6 weeks.
6. Counsel patient on stress management and lifestyle modification.

### Grounding Report | 40/100 | risk high
